# South-West Freight Strategy

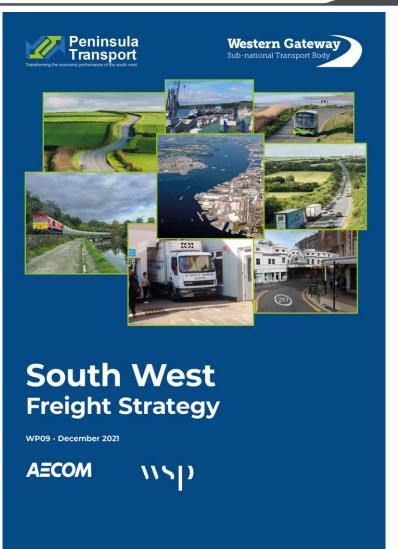

Western Gateway STB

and

Peninsula Transport STB

# SW Freight Strategy – Why an STB strategy?

- Freight traditionally left to the private sector.
- Commercially sensitive information lack of data transparency.
- Challenging to plan optimally for freight in purely competitive market.
- Lack of collaboration can lead to sub optimal provision e.g. warehouse sharing/hubs not delivered that serve wider good across multiple stakeholders.
- STB can take a strategic, regional view and convey agreed, regional priorities to DfT, National Highways and Network Rail though a joined up strategy.
- Propose a multi modal package of interventions that will improve freight efficiency, reduce freight journey times, reduce congestion, reduce carbon emissions and support economic growth.

## South West Freight Strategy – Why?

- First joint Freight Strategy for the South West
- Private sector freight operators view SW as a region not STB boundaries
- Brings together private and public sector stakeholders on a regional basis
- Approach favoured by DfT, National Highways and Network Rail
- Aligns the diverse areas of the South West and provides joined up approach to freight in the region reflecting the reality of freight movements
- Vision and strategy will address the challenges, opportunities, and priorities for the South West over the next 30 years to 2050.

## South West Freight Strategy – High level Findings

- Food and Drink, Quarrying and Mining (Peninsula) are the largest commodity categories imported and exported from the area.
- Quarrying industries provide raw materials across the UK for manufacturing and construction sectors.
- Strong case for expanding heavy rail freight and mode shift away from long distance road haulage of bulk goods.
- Benefits
  - less congestion on the roads (plus more capacity for other road freight movements),
  - a reduction in environmental damage caused by HGVs and
  - greater efficiencies within the freight industry.
- Intermodal terminals opportunities identified
- Reduce 'empty running' HGVs (22% of HGV journeys)

### South West Freight Strategy - Methodology

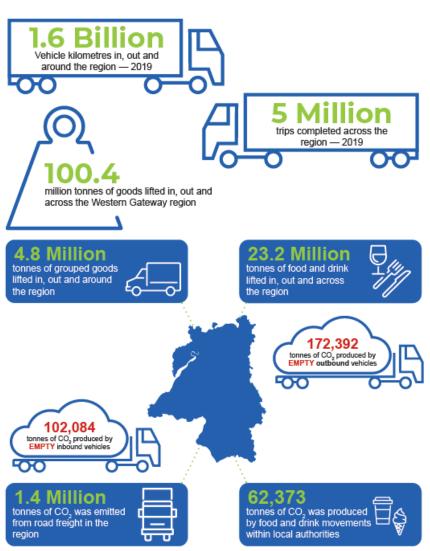

- Bespoke data analysis inc large dataset provided by DfT,
- Case study learnings rail, road, maritime and aviation,
- Extensive stakeholder engagement including:
  - One to one interviews with key stakeholders
  - Two online workshops over 60 participants
  - Stakeholder questionnaire on draft interventions
- Freight interventions development
- LA and STB Officer, Key agencies and DfT peer review and feedback

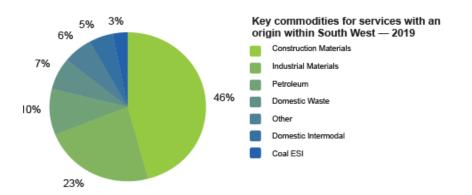

### South West Freight Strategy – WG key Facts

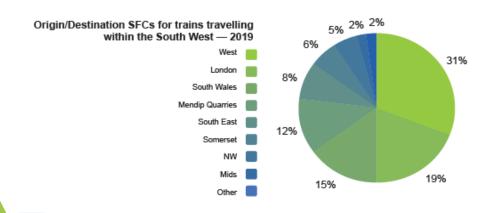

#### **Western Gateway**

### SW Freight Strategy – Issues

Western Gateway
Sub-national Transport Body

- SW dependent on road based freight
- Lorry driver shortage, national issue;
- Road congestion SW strategic road network is less developed than elsewhere – pinch points;
- Road freight cleaner now but still high pollution levels;
- Availability of electric charging or gas fuelling infrastructure
- Questions over the role of STBs in addressing the issues outlined and shaping future priorities with different stakeholders;
- Region has commercial ports with spare capacity;
- Airports focussed on passenger traffic with minimal tonnage of air freight;
- Lack of active rail freight terminals is main barrier against moving more products by rail;

Growing and ageing population located in difficult and expensive to serve areaes

Lorry driver Romanic Shortages and Iack of enthusiam to join logistics sector decay

Road sector a major polluter and clear direction needed on decarbonising the industry

How to tap into the range of alternative energy sources the region could produce to support the sector

Congestion on SRN and what more can be done to share the pressure

Connectivity
and journey time
reliability due to
lack of suitability
and capacity of the
network

Few alternative routes of road and rail operators during incidents

Pressures of advancements in technology and the efficiency of supply chains facing the demand

Opportunities for rail, if supported, through rail terminals and advancements in line capabilities i.e. electrification

Opportunity for ports to exploit new opportunities to support sector and maximise

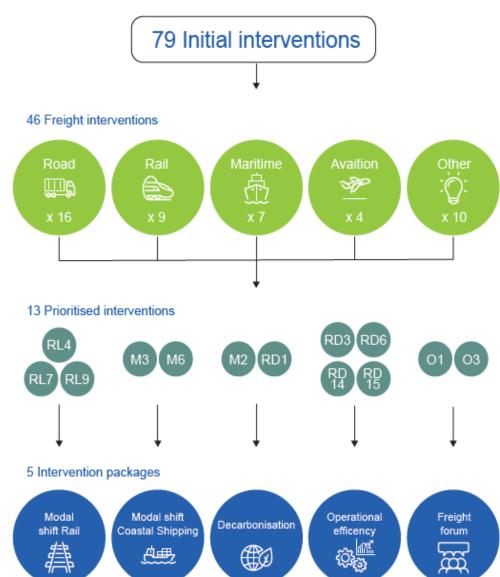

## SW Freight Strategy – Interventions

Strategy proposes 46 interventions packaged into 6 themes, split into 5 modes:

- Connectivity
- Decarbonisation
- Info and awareness
- Infrastructure
- Operational efficiency
- Technology

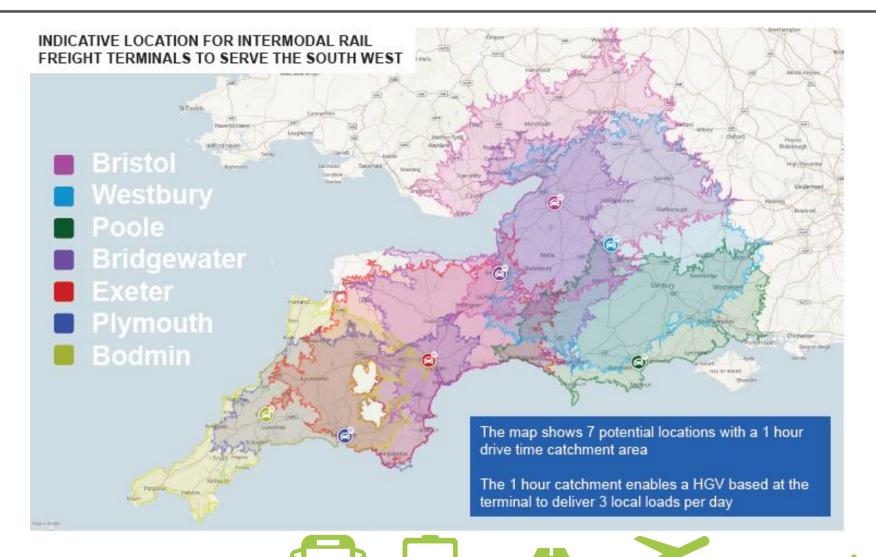

# SW Freight Strategy – Implementation example

- Indicative locations for potential rail freight terminals
- Freight Steering Group will discuss and prioritise accordingly in partnership with member LAs, industry, Freight Operating Companies (FOCs),
- key agencies and DfT
- Local issues will have to be overcome on a case by case basis and business cases developed.

# Questions?

### South West Freight Strategy – Issues

- Covid-19 has led to an increase in the number of vans required in the UK
- Online retail reached a record proportion of total retail sales in January 2021 at 35%.
- 2019-20 Van Statistics survey "delivery/collection of goods" accounted for 23
   % of all van mileage.
- Limited route choice in and out of the South West: Three core strategic corridors (M5/A38, A303/A30/A35/A31, A361).
- RIS2 National Highways study investigating corridors between the M4 and the Western Gateway South coast – addressing fact that routes currently have slow journey times and poor resilience e.g. A350, A37, A338 and A36.
